EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. Authorization for the change to claim 1 was given in a telephone interview with Bradley Lytle on March 16, 2006. The application has been amended as follows:

- Replace claim 1 with the following version:

Claim 1: An optical fiber for optical amplification, characterized in that a full width at half maximum of a gain spectrum is 45 nm or more; and a value of power conversion efficiency is 80 % or more.

- In claim 10, line 4, insert “ % ” after “80”.
- In claim 18, change the status identifier to “(Previously Presented)”.

The above changes are made to clarify claim 1 and to correct minor typographical errors in claims 10 and 18.

Allowable Subject Matter

Claims 1 and 3-24 are allowed. The allowability of claims 3-24 was explained in a previous Office action. As to claim 1, applicant has persuasively argued that the previously applied Kinoshita reference (US 2002/0027703) does not in fact anticipate claim 1. In particular

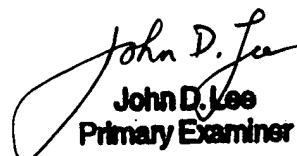

Kinoshita specifically states that the gain band of the erbium doped fiber is only about 30 nm wide ([0094]; see also fig. 22). The rejection misconstrued fig. 24 as showing a wide gain band. Fig. 24 shows excitation bands for erbium, but the actual amplification or gain is yielded in a different band (generally around 1550 nm as shown in fig. 22). The reference does not disclose or suggest that the gain bandwidth itself could be made as large as 45 nm at FWHM. Accordingly the rejection based on Kinoshita has been withdrawn. Since no other cited art teaches or suggests an optical fiber having all the recited characteristics, claim 1 is deemed to be allowable.
